PROJECT BLUEPRINT V1.0

NETS WIKI

A living, AI-compiled knowledge base for Brooklyn Nets fans. Every trade. Every pick. Every prospect. All connected.

THE PROBLEM

NETS FANS HAVE NO SECOND BRAIN

The information exists. It's just scattered across a dozen sites, none of which talk to each other, and none of which are built for Brooklyn.

NETSDAILY

Great journalism. Zero tools. No structured data. No trade trees, no pick tracking, no interactive analysis. News disappears into the feed.

SPOTRAC / BBREF

Raw numbers without narrative. Salary cap data tells you what, not why. No team-specific story connecting the dots across years of moves.

FANSPO / TRADE MACHINES

Fun trade simulators with zero context. You can build a trade but can't see how it fits the rebuild timeline, pick inventory, or cap trajectory.

WIKIPEDIA / FANDOM

Generic, shallow, and outdated. No team-specific depth. No connections between trades, players, and picks. No editorial voice.

THE GAP: NO ONE HAS BUILT A TEAM-SPECIFIC KNOWLEDGE + NARRATIVE + TOOLS PLATFORM.

The Ringer owns trade stories. Spotrac owns cap data. Cleaning the Glass owns analytics. Nobody owns the connected Nets intelligence layer.

THE SOLUTION

A LIVING KNOWLEDGE BASE

AI-compiled, human-curated. Raw sources flow in automatically. The agent compiles wiki articles. You add the editorial judgment that makes it BKGrit.

01 TRADE TREES

Interactive visualizations showing how the KD trade branched into 8 first-round picks. Every node links to a deeper article. Pull the thread and see the whole story.

02 PICK INVENTORY

Color-coded timeline of every first-round pick the Nets own through 2031. Source team, protections, and swap rights at a glance. Updated automatically.

03 CONNECTED WIKI

Every player, trade, season, and concept interlinked. Click any name and trace every connection. The deeper you go, the more you see.

04 AI AGENT PIPELINE

Automated data gathering from ESPN, Basketball Reference, and Spotrac. Daily compilation into wiki articles. Fresh data without manual work.

ARCHITECTURE

HOW IT WORKS

The Karpathy LLM Wiki pattern: raw sources are immutable inputs, the AI agent compiles them into structured, interlinked wiki articles.

RAW SOURCES
Transactions, pressers, scouting reports, beat tweets, stats

→

AI AGENT
Compiles, cross-references, links, and structures

→

WIKI ARTICLES
Players, trades, seasons, draft, concepts

→

BKGRIT.COM
Pages, sidebars, graph explorer, tools

AUTOMATED DATA SOURCES

ESPN API
Scores, news, team data
High reliability

BASKETBALL REF
Stats, contracts, history
High reliability

SPOTRAC
Transactions, salary cap
Medium-high reliability

NBA.COM CDN
Live scores, schedules
Medium (IP blocks)

BALLDONTLIE
Game-day live stats
Free tier, high reliability

RSS FEEDS
NBA.com, team news
Official, easy to automate

EVERY ARTICLE INCLUDES

Frontmatter: title, tags, sources, confidence level, last updated • **Sections:** Summary, Key Insights, Details, Related, Open Questions • **Links:** [[wikilinks]] to every related article

MARKET LANDSCAPE

NOBODY HAS BUILT THIS

Every competitor owns one piece. BKGrit owns the full stack — narrative + data + tools + knowledge graph — for a single team.

PLATFORM	WIKI	TOOLS	TRADE TREES	AUTO-UPDATE	TEAM FOCUS	GRAPH
NetsDaily	×	×	×	×	✓	×
The Ringer	×	~	~	×	×	×
Spotrac	×	✓	×	✓	×	×
Fanspo	×	✓	×	~	×	×
Fandom Wiki	~	×	×	×	×	×
BKGrit KB	✓	✓	✓	✓	✓	✓

UNCLAIMED MARKET GAPS

TEAM-SPECIFIC INTELLIGENCE

No platform combines narrative + tools + data for a single team. Every site is league-wide or pure journalism.

CONNECTED TIMELINES

Trades, drafts, and cap moves exist in silos. Nobody overlays them to show cause and effect across years.

KNOWLEDGE GRAPH FOR SPORTS

Zero public sports knowledge graphs exist. Academic papers prove the concept. Nobody has shipped it for fans.

AI-COMPILED, HUMAN-CURATED

The Karpathy pattern hasn't been applied to sports. Automated freshness + editorial voice is a new category.

DIFFERENTIATION

WHAT MAKES THIS SPECIAL

1 "PULL THE THREAD" UX

See a player name anywhere on the site. Click it. Trace every connection: who they were traded for, what picks came back, who was drafted with those picks, how those players are performing. Every entity is a portal into the knowledge graph.

2 KB-POWERED TOOLS

The Trade Machine sidebar shows the player's wiki article. The War Room shows pick inventory context. The Lottery Sim links to Tank Math. The KB isn't a section — it's the brain that powers every tool on the site.

3 VISUAL KNOWLEDGE GRAPH

Force-directed graph explorer where fans click through a visual web of players, trades, picks, and seasons. Nobody in sports has shipped this publicly. It's the "wow" feature.

4 CONFIDENCE + FRESHNESS

Every fact shows when it was last verified and where it came from. "NBA.com official, high confidence" vs. "beat reporter tweet, medium confidence." Builds trust that no wiki has.

5 CAP NARRATIVE LAYER

Spotrac tells you the numbers. The Nets Wiki tells you the story. How did the Nets get here? Which trades caused it? What's the path out? Data with meaning.

6 DRAFT OUTCOME TRACKER

Every Nets draft pick since 2012: where they are now, how they panned out, who was picked after them. A "were we right?" scoreboard. Nobody does this well.

BUILD PLAN

FIVE PHASES TO SHIP

Prove the concept with Nets fans first. Each phase adds a layer. Each layer makes the platform stickier.

1

DASHBOARD + WIKI PAGES

Nail the KB landing page and article rendering. Trade tree visualization, pick timeline, player cards, category browser. Get the UX right with seed content.

/KB ROUTE | TRADE TREE SVG | PICK TIMELINE | ARTICLE PAGES | WIKILINKS

2

AUTOMATED AGENT

Build the data pipeline. ESPN + Basketball Reference + Spotrac flow into raw/. Scheduled Claude agent compiles into wiki/. Daily updates, zero manual work.

DATA FETCHERS | SCHEDULED AGENT | AUTO-COMPILE | GIT COMMITS

3

TOOL INTEGRATION

Wire the KB into existing BKGrit tools. Trade Machine gets player context sidebars. War Room gets pick inventory. Lottery Sim links to Tank Math. The KB becomes the brain.

CONTEXT SIDEBARS | CROSS-LINKING | SEARCH API

4

KNOWLEDGE GRAPH EXPLORER

Visual force-directed graph from wikilinks. Fans explore the entity map: click a player, see every trade, pick, and season they connect to. The "wow" feature.

GRAPH.JSON | FORCE-DIRECTED VIZ | ENTITY HOVER CARDS

5

COMMUNITY + SCALE

Fans contribute scouting reports and trade proposals as raw sources. The agent compiles the best ones. Prove the model, then expand to other teams.

FAN SUBMISSIONS | UPVOTE/CURATION | MULTI-TEAM ARCH

SCALABILITY

BUILT FOR EVERY TEAM

The architecture is team-agnostic. Prove it with the Nets, then replicate for all 30 teams. The data pipeline, templates, and tools are shared infrastructure.

UNIVERSAL STRUCTURE

raw/ and wiki/ categories (players, trades, seasons, draft) apply to every NBA team. Swap the seed content and the KB works for any franchise.

SHARED AGENT

The data pipeline (ESPN, BBRef, Spotrac) serves all 30 teams. One agent with a team filter parameter populates any team's KB automatically.

PER-TEAM VOICE

The facts are universal. The editorial voice is team-specific. Each fanbase has its own culture, tone, and concerns. The agent compiles facts; the community adds personality.

PLATFORM PLAY

White-label ("YourTeamGrit") or multi-tenant with team namespaces. Infrastructure is shared. Content is per-team. Network effects grow with each team added.

30 TEAMS × MILLIONS OF FANS PER TEAM = MASSIVE TAM

Build it for BKGrit. If fans use it, you have a platform. If they don't, you learned cheap.

WHY NOW

THE TIMING IS PERFECT

Three forces converging make this the right moment to build.

10+

FIRST-ROUND PICKS

The Nets own a historic pick haul through 2031. Fans are desperate for tools to track and understand it. There has never been more to follow.

AI

AGENT ERA

LLM agents can now compile, cross-reference, and maintain a knowledge base autonomously. This wasn't possible 18 months ago. The cost of keeping a wiki fresh just dropped to near-zero.

0

COMPETITORS

Nobody has built a team-specific knowledge platform. No connected wikis, no knowledge graphs, no AI-compiled sports intelligence. First mover advantage is real.

THE NETS REBUILD IS THE PERFECT TEST CASE

Rebuilding teams generate the most complex decision trees. Trades branch into picks branch into prospects branch into cap implications. Contending teams are simple: "did we win?" Rebuilding teams need a map. The Nets have the most complex rebuild in the NBA right now — if the KB can handle this, it can handle any team.

THE WAR ROOM EVERY NETS FAN DESERVES.

Built on BKGrit.com. Powered by AI. Proven with Brooklyn.
Scaled to every team.
